## Levelize the tax on fixed income investments with corporately-owned Participating Whole Life

## Corporate Clients

Are you paying more tax than you need to on your corporate taxable fixed income investments? By recapturing some of the money currently paid in taxes, your corporation may not only be able to increase its wealth but also the net amount it can pay to its shareholders.

## WHAT DO A LOT OF CORPORATIONS DO WITH THEIR TAXABLE FIXED INCOME INVESTMENTS?

- Each year they withdraw only the amount of interest income earned that is required to pay the tax for that year.
- They reinvest the remainder of the interest income earned back into the fixed income portfolio. Growing investment balance $=$ more tax payable.

Example \#1: Fixed income investment
Client has \$3,075,000 of after-tax surplus from business income. The full amount is invested in a taxable fixed income investment.

|  |  | Fixed income | nvestment |  |
| :---: | :---: | :---: | :---: | :---: |
| Years | Opening balance | Interest income earned | Amount of interest income withdrawn to pay tax ${ }^{1}$ | Closing balance ${ }^{2}$ |
| 1 | \$3,075,000 | \$ 153,750 | \$ 76,875 | \$3,151,875 |
| 10 | \$3,840,254 | \$192,013 | \$ 96,006 | \$3,936,260 |
| 20 | \$4,915,849 | \$245,792 | \$122,896 | \$5,038,746 |
| 35 | \$7,119,616 | \$355,981 | \$177,990 | \$7,297,606 |
| Cumulative tax paid by year 35 |  |  | \$4,222,606 |  |

- By year 35, reinvesting the interest income remaining after taxes are paid results in a cumulative tax bill of $\$ 4,222,606$.
- At death ${ }^{3}$, the investment value is $\$ 7,297,606$. It is paid as a taxable dividend to the corporation's shareholders. With the distribution of the investment value and corporation's Refundable Dividend Tax on Hand (RDTOH) as a taxable dividend, the net amount to the shareholders, including the deceased shareholder's estate is $\$ 5,438,115$.
HOW CAN A CORPORATION LEVELIZE AND PAY LESS TAX ON THEIR FIXED INCOME INVESTMENTS USING PARTICIPATING WHOLE LIFE INSURANCE?

annual interest income earned on fixed income

- Each year, the corporation withdraws the full amount of interest income earned, leaving only the principal. Level investment balance = level tax payable.
- The corporation uses part of the interest income earned to pay the tax for that year. The remainder is used to pay the annual premium on a corporately-owned tax-exempt whole life insurance policy for the next year.

[^0]
## TAX-EFFECTIVE SOLUTION

## Example \#2: Fixed income investment + Life insurance

Client has $\$ 3,075,000$ of after-tax surplus from business income. $\$ 75,000$ is used to pay the initial annual premium of a life insurance policy and the remaining $\$ 3,000,000$ is invested in a taxable fixed income investment. Each year, the interest income earned $(\$ 150,000)$ on the fixed income investment is used to pay the taxes on the investment $(\$ 75,000)$ and the next annual premium for the life insurance policy.

Cumulative tax paid by year 35 is $\$ 2,625,000(\$ 75,000 \times 35$ years)

| Life insurance policy ${ }^{5}$ |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Years | Total cash value <br> $(\text { year end) })^{6,8}$ | Total death benefit <br> (year end) | Total cash value <br> $(\text { current less } 1 \%)^{7,8}$ | Total death benefit <br> $(\text { current less } 1 \%)^{7,8}$ |  |  |
| 1 | $\$ 64,592$ | $\$ 1,193,154$ | $\$ 64,061$ | $\$ 1,191,728$ |  |  |
| 10 | $\$ 910,761$ | $\$ 2,399,514$ | $\$ 864,061$ | $\$ 2,304,403$ |  |  |
| 20 | $\$ 2,392,532$ | $\$ 4,020,341$ | $\$ 2,139,699$ | $\$ 3,620,921$ |  |  |
| 35 | $\$ 6,243,345$ | $\$ 7,703,480$ | $\$ 5,023,215$ | $\$ 6,215,516$ |  |  |

## Results:

Lower taxes and higher value for corporation

- By year 35 , using a life insurance policy to levelize the tax on a fixed income investment reduces the cumulative tax bill by $38 \%$.
- At death ${ }^{3}$, the combined value of the fixed income investment and the life insurance proceeds is $47 \%$ higher (based on the current dividend scale) than with the investment alone.

Under current less 1\% the Fixed Income investment + Life insurance value is \$9,215,516
This is a $26 \%$ increase in value over the Fixed Income investment.
Higher net payment to shareholders

- At death ${ }^{3}$, the net payment to the surviving shareholders, including the deceased shareholder's estate, is $79 \%$ higher than with the investment alone.
- The investment lincluding the balance in the corporation's RDTOH account) is paid to the surviving shareholders as a taxable dividend and taxed at $45 \%{ }^{4}$.
- The life insurance proceeds are paid tax free to the corporation. The addition to the capital dividend account (CDA) is distributed as a tax-free capital dividend to the surviving shareholders.

Under current less $1 \%$ the Fixed Income investment + Life insurance value is \$8,161,902.
This is a $50 \%$ increase in value over the Fixed Income investment.

## Contact your financial advisor to find out how this concept can work for you.

${ }^{5}$ All calculations are based on an Equimax Wealth Accumulator ${ }^{\circledR}$, male, age 50, standard non-smoker rates as of August 12, 2023. Paid-up additions dividend option. Maximum
 of the policy. 7llustrated values assume the current dividend scale with a $1 \%$ reduction in the dividend scale interest rate remaining unchanged for the life of the policy. ${ }^{8}$ Dividends are not guaranteed and are paid at the sole discretion of the Board of Directors. Dividends may be subject to taxation. Dividends will vary based on the actual investment returns in the participating account as well as mortality, expenses, lapse, claims experience, taxes and other experience of the participating block of policies.
The example is for illustration purposes only. Actual results will vary. Based on current tax legislation and may change. [^0]:    ${ }^{1}$ Assumes an average annual rate of return of $5 \%$ and a marginal tax rate of $50 \%$. The example is for illustration purposes only. Actual results may vary. ${ }^{2}$ Assumes no withdrawals from principal. ${ }^{3}$ Assumes death at age $85 .{ }^{4}$ Investment value is paid as a taxable dividend. The net amount includes the fixed income investments after $45 \%$ dividend tax rate and cumulative addition of $30.67 \%$ of investment income into the corporation's RDTOH account. The value of any other investments and any balance in the corporation's RDTOH account and capital dividend account are excluded from this example.
